

St. Francis Hospital - Eastside
Hospital Associated Infections Report
February 1, 2008

Surgical Site Infection (SSI) Rate by Procedure and Risk Index 07/01/2007 – 11/30/2007

Procedure	Risk Category ^{1,2,3}	No. of Infections	No. of Specific Procedures Performed ⁴	Infection Rate (per 100 procedures)
Abdominal Hysterectomy	0	1	106	0.94
	1	0	37	0.00
	2,3	*	4	*
Vaginal Hysterectomy	0,1,2,3	0	81	0.00

1. **Basic SSI Risk Index:** NHSN assigns surgical patients into risk categories based on the presence of one or more of three major risk factors. For further explanation of the risk index, please go to the [Definition of Terms](#).
2. If there is more than one Risk Category in a row (e.g., 2, 3), it means that the risk of infection between the individual categories was not different statistically, so the data from those categories shown were combined.
3. If you do not see a risk category (0, 1, 2, 3), that means that no surgeries were performed for that particular risk group.
4. * = Too few procedures. Reporting on too few procedures is a risk to patient confidentiality. If five or fewer surgical procedures are performed, the report for the number of infections will be deferred until more procedures are performed.

Central Line Associated Blood Stream Infection (CLABSI) Rate 07/01/2007 – 11/30/2007

Central lines were not used in the critical observation unit in this hospital during the July 2007 to November 2007 time frame.

Hospital Profile

Number of beds set-up and staffed: 90

Lab Capabilities: Does this hospital's laboratory use the Clinical and Laboratory Standards Institute (CLSI) antimicrobial susceptibility standards? Yes

Infection Control Process

Number of Fulltime Infection Control Practitioners: 0.6

Total hours per week performing surveillance: 10

Total hours per week for infection control activities other than surveillance: 14
